About CARACAL

Hitting the Mark

CARACAL is a regional leader in high-performance small arms. The company designs, manufactures, tests and assembles small arms from 9mm to 12.7mm calibre, including combat pistols, submachine guns, tactical rifles and sniper rifles.

Established in Abu Dhabi in 2007, CARACAL is today part of the Missiles & Weapons cluster of EDGE.

CARACAL's experience reflects in the quality, performance and dependability of its growing range of weapons, developed to meet the evolving and challenging nature of warfare as well as the diverse mission requirements of customers in the UAE and abroad.

To ensure flawless performance under any circumstances, irrespective of weather or mission conditions, each weapon the company produces is manufactured and tested to the high international standards specified by NATO and CIP. To provide those on the front lines with the firepower they require, CARACAL's in-house team of engineers and designers continues to routinely enhance and update the company's products.

CARACAL incorporates advanced technology innovations in the manufacturing of small arms. Additive manufacturing, combined with the use of CAD/CAM software during design and prototyping, allows the company to quickly and accurately refine the ergonomics of each weapon component to surpass its stringent performance requirements.

CARACAL also leverages additive manufacturing in the production of weapon accessories. As the efficiency and safety of 3D printing of metals and composites evolve, the company is exploring the use of this technology in manufacturing metal parts for lighter, more customisable weapons.
